

Duo Multi-Factor Authentication (MFA): Duo on J2ME and Symbian Phones

Duo's application for J2ME and Symbian phones is called "Duo Token" and makes it easy to quickly generate login passcodes, even without an Internet connection or cell service.

While Duo MFA does not officially support J2ME or Symbian devices, you can use this app to log in to Duo.

Passcodes

Choose "**Generate**" from the menu to get a one-time passcode for login. This works *anywhere*, even in places where you don't have an Internet connection or can't get cell service.

Activating Duo Mobile

Duo Mobile has to be activated to link it to your account. During the setup process you'll get an activation code – enter the activation code to activate the app. You will only have to do this once.
