REVISION HISTORY

Revision No.	Revision Date	Authors	Description of Changes
1.0	11/04/2013	CISO	Populate Into Standard Template

APPROVED BY

This Policy is established for Policies pertaining to information technology by the approval signatures below.

Name	Title	Signature	Date
Connie Barrera	Executive Director, Information Security and Compliance	<i>Signature on file</i>	12/04/2013
Tim Ramsay	Chief Information Security Officer	<i>Signature on file</i>	12/04/2013

	Document ID: POL-UMIT-A155-010-01	
	Information Technology	Supersedes: A155 Information Security Policy
	Effective Date: 01/01/2014	Page 2 of 6
Document Title: Information Security Policy		

PURPOSE:

Information Security exists to further the mission of the University. The University is comprised of large and diverse populations with evolving needs related to information technology resources and data. University management is committed to safeguarding those resources while protecting and promoting academic freedom. Although intrinsic tension exists between the free exchange of ideas and information security, and can manifest itself in some circumstances, the requirements that follow have been identified to promote the best balance possible between information security and academic freedom.

The information security policy establishes a University-wide approach to information security. Information security is intended to foster the academic and business interests of the university by helping to ensure the confidentiality, integrity, and availability of information resources and data; reduce the risk of information loss by accidental or intentional modification, disclosure, or destructions and preserve the University's rights and remedies in the event of such a loss by implementing cost effective and appropriate controls.

SCOPE:

This policy applies to all University employees, faculty, students, contractors, guests, consultants, temporary employees, and any other users, including all personnel affiliated with third parties who have access to University information technology resources.

DEFINITIONS:

- **University:** "University" refers to the University of Miami as a whole and includes all units.
- **University Member/Affiliate:** Anyone associated with the University of Miami including, but not limited to, employees, students, contractors, guests, consultants, temporary employees, and any other users who have access to University resources.

POLICY:

Information Security exists to further the mission of the University. The University comprises large and diverse populations requiring access to information systems. University management is committed to safeguarding those resources recognizing academic freedom. Although intrinsic tension exists between the free exchange of ideas and information security and can manifest itself in some circumstances, the following framework has been identified to promote the best balance possible between information security and academic freedom.

To address information security effectively the following framework has been identified.

University management may become aware of situations that could place the University's facilities, employees, critical business and academic processes, critical business and academic information, and intellectual property at risk or harm. These situations include, but are not limited to:

	Document ID: POL-UMIT-A155-010-01	
	Information Technology	Supersedes: A155 Information Security Policy
	Effective Date: 01/01/2014	Page 3 of 6
Document Title: Information Security Policy		

- Knowledge of existing or potential security violations.
- Knowledge of a situation that may potentially place the University's critical business and academic information or intellectual property at risk of being lost, altered, or unavailable.
- Terminated employees or other business representatives who continue to have access to facilities or Information Technology resources once access is no longer warranted.
- Changes to user access needs (e.g., employees who transfer to another department and employee promotions).
- Processes that may place the University's information at risk.
- Unsolicited requests for University's information from external sources (e.g., questionnaires requesting organization financial and bio-data).
- Physical security or safety concerns.

All units must establish minimal requirements for the security domains listed below where appropriate. University management must ensure that employees are complying with security policies, standards, and guidelines.

Physical Security:

Physical security measures for controlling access to electronic information resources through physical means, including disaster controls, physical access controls, device and media controls, and procedural controls over financial instruments and maintenance records must be in place.

Access to data network facilities and other sensitive areas must be provided based on the principle of least privilege and the user's responsibilities.

Personnel Security:

The recruitment process must include control measures and security provisions. Appropriate background checks of individuals applying for employment, depending on the position and its associated responsibilities within the organization, must be conducted. Formal policies, procedures and processes must be in place to ensure all personnel who have access to sensitive information have the required authority as well as appropriate clearance. Upon employment all faculty and employees must be informed of and agree to the protection of confidential information.

Logical Security:

Access to data network resources must be controlled on the basis of "least privilege" and need to know. Adequate security must be provided to ensure the protection and maintenance of integrity, confidentiality and availability over the systems and information.

Communications Security:

It is important to establish an efficient flow of information without compromising the integrity and confidentiality of such information. The University of Miami may share information with University employees, students, contractors, guests, consultants, temporary employees, and partner organizations which have a legitimate role. The University may also share information with non-

Document Title: Information Security Policy		

partner organizations as required by law or by court orders/subpoenas. The appropriate information sharing protocol for each case must be established.

Systems Development:

All systems developments must comply with the information security policies of the University. All systems developments must include security issues in their consideration of new developments or modifications.

Risk Management:

A risk management program must be put in place to identify and mitigate risks to IT systems and to Protected Data throughout University systems. Risk assessments must be conducted periodically to identify and reduce possible threats to University information security. An assessment of risks must be conducted for each information system to ensure it is secured appropriately in a cost effective manner.

Disaster Recovery and Contingency Planning:

Disaster Recovery and contingency plans must be developed for dealing with emergency situations in the event of damage, failure, and/or other disabling events that could impact the critical business and academic processes and the information systems that support such processes. See Separate Policy Statement

Security Incident Management:

Information Technology security incident response policy and procedures must be developed for dealing with security events that may require the full participation of Information Technology technical personnel as well as divisional leadership to manage the outcome properly. See Separate Policy Statement

Security Awareness, Training and Education:

All information resource users must be made aware of policies regarding access to, and appropriate use of University information resources, and especially of the need to guard Protected Data. Unit leaders play an important role in fostering an environment in which all members of the University community are “security aware.” In particular cases, employees may need to receive formal security training. Unit leaders should periodically remind their employees to re-read this policy and the other IT security policies applicable to them and to understand the role they play in protecting University information resources.

University of Miami Guidance for Managing Third-party Access:

It is important to maintain the security posture of the University of Miami network infrastructure and only allow third-parties access to what is needed as part of their business/academic relationship with the University. Access by third parties should be controlled and should only be granted where there is a business/academic need. In addition, a risk assessment must be conducted to determine if the security controls in place or planned will meet the security requirements of the University. If feasible, security controls must be defined clearly in the contract language.

System Security Plan Policy:

	Document ID: POL-UMIT-A155-010-01	
	Information Technology	Supersedes: A155 Information Security Policy
	Effective Date: 01/01/2014	Page 5 of 6
Document Title: Information Security Policy		

Systems Security plans must be developed and documented for all IT FISMA related systems in accordance with NIST SP 800-18. Plans must be reviewed and updated when major system changes occur or at least once every three years.

EXCEPTIONS:

Any requests for exceptions to this policy must be submitted in writing and will be reviewed on a case by case basis. Exceptions shall be permitted only after written approval from the responsible Vice President or Information Technology designee of the respective campus. The list of exceptions shall be reviewed annually and cancelled as required.

IMPLEMENTATION:

Information Security Privacy and Policy Council:

- Forwards proposed policies and recommendations for changes in policy as needed to the senior officials of the university, to the Academic Deans Policy Council, to the Information Technology and Advisory Committee or its successor, and to the Faculty Senate as appropriate
- Responsible for promulgating University-wide policy to address the different domains identified within this policy.

University Member/Affiliate:

- Responsible for following policy requirements as required by their role.

Chief Information Security Office:

- Responsible for regular review of the Information Security Policy. The review will occur annually or when significant changes occur.

Responsible Vice President or Information Technology designee:

- Responsible for reviewing and approving or denying exception requests.
- Responsible for reviewing exceptions yearly.
- Responsible for monitoring the enforcement of the policy.

SANCTIONS:

Knowing violations of the policy will be addressed by disciplinary policies and procedures applicable to the individual.

All known and/or suspected violations must be reported to the applicable Systems Administrator, who will report, as appropriate, to the applicable department. All such allegations of misuse will be investigated by the appropriate University administrative office with the assistance of the Department of Information Technology and the Department of Human Resources.

Penalties may include:

Document Title: Information Security Policy		

- Suspension or termination of access to computer and/or network resources;
- Suspension or termination of employment, to the extent authorized by other university published policies and procedures;
- Suspension or termination of contract computer and/or network services; or
- Criminal and/or civil prosecution.

OTHER APPLICABLE POLICIES:

- Access Control and User Account Management Policy
- Business Continuity Disaster Recovery Policy
- Cardholder Information Security Policy
- Change and Incident Management Policy
- Electronic Data Protection and Encryption
- IT Audit Policy
- Hardware Decommissioning Policy
- Malicious Software Protection Policy
- Mobile Computing Policy
- Password Policy
- Information Technology Security Incident Response Procedures Policy
- Information Technology Security Incident Response Notification Policy
- Remote Access policy

ENFORCEMENT:

Chief Information Security Officer of designee (CISO) is Responsible for monitoring the enforcement of the policy.
